

Hours Extended for Next Day Inspection Requests

Contractors, homeowner permit holders and others desiring Division of Building Safety inspection services now have an additional hour each day to submit their requests for next day inspections.

Inspections may be requested at any time through our automated telephone inspection request system. Effective immediately, the cutoff time for next-day inspections is extended by one hour to 5:00 p.m. Mountain Time. We have taken this step in order to make it easier and more convenient for our customers to request inspections, especially in cases where scheduling may be critical.

Although every effort is made to accommodate next day inspection requests, fluctuations in volume of work and geography make it impossible for DBS to *guarantee* when an inspection will be performed. The automated system will schedule the requested inspection based on inspector availability and will inform the person making the request as to when the inspection is scheduled to be performed.

Inspection request procedures remain the same. They are outlined on our website here: <http://dbs.idaho.gov/CASdocs/InspectProc.html>

If you experience problems or need assistance making an inspection request, please feel free to call our toll-free help line at 800 955-3044 at any time during normal business hours.
